ABOUT ME

Hi there! I am a QA engineer with a passion for technology, crypto-currencies, web development, teaching, and GNU/Linux. I have always been drawn to the world of technology, and I love learning about the latest developments in the field. In my current role as a QA engineer, I am responsible for ensuring the quality of software products through thorough testing and analysis.

In addition to my work in QA, I am also interested in crypto-currencies and have been following the industry for several years. I am fascinated by the potential of blockchain technology and the ways it could revolutionise various industries.

In my spare time, I enjoy dabbling in web development and teaching others about the various tools and technologies that I have learned. I am also a big fan of GNU/Linux and regularly use it as my primary operating system.

Overall, I am a driven and curious individual who loves to learn and explore new ideas. I am excited to continue growing and developing my skills as a QA engineer and to continue contributing to the world of technology.

My referances are available trough asking.

WORK EXPERIENCE

[06/12/2022 – Current]

QA Engineer

OSF Digital
